

InvenTree Demo

Username: Engineer
password: partsonly

1. Opens with a list of latest parts, along with their IPN number, part name, description, category and stock.
2. We can add sub categories, stock items, but can't purchase or order stocks.
3. The build order tab shows the progress of a stock along with the date created and issuing authority.
4. While viewing orders and stocks, we can filter the list on the basis of overdue, build status, active, assigned to me.
5. We can also download the data to our local computers in csv, txs or xlsx format.
6. Different views are available like tree view, calender, list view.
7. There is also an option to scan barcode and load the data.
8. On clicking a particular stock, we can get information about categories, status of build, outputs, attachment, stock allocation and notes associated with it.
9. We also get details about pricing, variants, scheduling and related parts on clicking a particular stock item.

Username: reader
password: readonly

1. The starting interface is same as engineer's, but we get extra tabs for Buy and Sell
2. As it is clear from the name, we can just view the data. Creating or editing a stock item is not allowed.
3. We can view the suppliers and part manufacturers.
4. The build order tab shows the progress of a stock along with the date created and issuing authority.
5. While viewing orders and stocks, we can filter the list on the basis of overdue, build status, active, assigned to me.
6. We can also download the data to our local computers in csv, txs or xlsx format.
7. Different views are available like tree view, calender, list view.
8. There is also an option to scan barcode and load the data.
9. On clicking a particular stock, we can get information about categories, status of build, outputs, attachment, stock allocation, and notes.

Username: allaccess
password: nolimits

1. The starting interface is same as engineer's, but we get extra tabs for Buy and Sell
2. We can view create and edit all the pages,
3. Rest of the features are same as reader's

Username: admin
password: inventree

1. We not only get the option of changing and editing data on the website, but we also get the admin options.
2. There is an option called view in admin panel, where we could get the information regarding settings, user settings, we can edit the description, issue authentication token etc.
3. For suppliers and purchasers, we get the option to edit their identity, parts supplied, and price breaks.
4. Change password option is also available for the admin.
5. Admin can also add social accounts, view upcoming, queued and failed tasks, error reports, otp devices, and a lot more.
6. Changing permissions of users, add multifactors, and login settings.
7. Rest features remain the same as allaccess,
